Alternatively by reducing Ice-4s enzymatic activity programmed cell death can be inhibited, this may be useful in the development of new cell lines which remain viable in culture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Promoting or preventing programmed cell death in vertebrate cells - by inhibiting the activity of interleukin-1 beta converting

                                                                                                                  A novel murine cell death gene (AAT31554), designated Ich-3, was identified as a member of the ICE/ced-3 family. It codes for a protein (AAR98464) that shows homology to mouse interleukin-1 beta converting enzyme (ICE), mICh-2 (see also AAR98461) and human Ich-1 (see also AAR98462-63). Full-length ICh-3 cDNA was isolated from a mouse thymus cDNA library. Expression of Ich-3 can be used in methods of regulating cell death, while antisense sequences may be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is the mouse Ice-4 protein coding sequence. The protein sequence of the present sequence was used in a sequence homology comparison with the protein sequences of human Ice-ced 3 homolog (Ich-1) (AAB14253), murine interleukin-1beta converting enzyme (mICE) (AAB14254), murine ICE2 (AAB14252) and C. elegans ced-3 (AAB14260). The present sequence is a member of a family of genes involved in programmed cell death (apoptosis). Ich-1 may play an important role in both the positive and negative regulation of apoptosis. The Ich gene may be used in gene therapy in disorders characterised by cell death e.g. neural and muscular degenerative diseases, myocardial infarcation, stroke, virally induced cell death and aging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human Ich-1L and Ich-1S proteins for negative and positive regulation of programmed cell death and for developing therapeutic methods for diseases and conditions characterized by cell death, e.g. myocardial infarction or stroke .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2000-464343/40.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-MAR-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL0.1840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; SEQ ID NO 26486; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Venter JC,

                                                                                                                                                                                                                                                                                                                  The invention relates to primers for synthesising full length cDNA clones, 830 cDNA molecules encoding a human protein have been isolated and nuclectide sequences of 5' - and 3' -ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                            Sequence 2149 BP; 659 A; 415 C; 531 G; 544 T; 0 other;

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 39265; 3071pp + Sequence Listing; English.

CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cc arctivity, and can be used in gene therapy and vaccine production. (I) cc proteins and polynucleotides may be used in the prevention, diagnosis and cc example, they may be used to treat disorders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome cs supplement the patients own production of (I). Additionally, (I) cc polynucleotides may be used to produce the secreted (I), by inserting cc diagnose and treat immune/haematopoietic-related diseases, especially cc cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cc AAK87694 represent human immune/haematopoietic antigen genomic
